

Teadit India

With more than 50 years of technology and experience in the sealing industry, TEADIT has manufacturing plants in Austria, INDIA, USA, Germany, Brazil, Argentina and China. It holds a worldwide distribution network spanning across 70 countries in five continents. Teadit is recognised as a world leader in the development and manufacturing of innovative fluid sealing products for the industrial segment. Its name stands for competence, quality and innovation and its products are known for their excellent performance and reliability even in the most demanding applications. “We must always innovate and try to become better to meet and exceed our market demands” says Carlos D Girão, Managing Director, Teadit India.

Production Plants in India

Teadit has recently unified their two plants in Vadodara, Gujarat. Here they are manufacturing high quality and top grade gland packings as well as metallic and non-metallic gaskets. The two facilities with more than 50,000 ft² are adjacent to each other to enhance their efficiencies and managing capabilities.

Girão explains that the desire for a quality product and premium services is high, which is why the company had initially built plants in India and has now recently expanded into the metals operations. In the past, Teadit has manufactured items such as gland packings and non-metallic gaskets. Now, however, these have been combined with the metals operations on their new facility in Vadodara. “We made significant investments over here from personnel, to equipment and inventory in order to bring a stronger focus on the end users. Our plants have state-of-the-art production equipment and capacity to respond fast to customers’ demands and urgencies. We want to become the reference for high quality fluid sealing solutions in the Indian market”.

Teadit India plants are ISO 9001 certified. They have been recently registered with EIL and UDHE and are awaiting approvals from other well known consultants who had already audited the facilities.

Competing with New technologies

Teadit leading edge products for Low Emission, Oxygen Service and Highly Abrasive Pump applications showcase its innovative profile and development capabilities. Their packing Style 2236 has a highly rated API 622 approval with 2ppmv average measurement throughout the whole test, as well as ISO 15848-1 Class A, API 607, TA-Luft, among others and they have recently developed Style 2238-OX for use on high demanding Oxygen Services.

Being a leader in the latest research and development trends is just one way that Teadit stands apart from their competitors. Teadit has a vast product line that includes structured PTFE and expanded PTFE joint sealants as well as gland packings, CNA fibre sheets, camprofiles, spiral wounds and double jacket gaskets among others. “Such a broad variety of products and the deep knowledge and understanding of the products allow us to specify the right solution for the customer’s needs instead of just offering one that is available”, says Akhilesh Pathak, Sales Manager - West India Region, Teadit. “We provide comprehensive technical support to our customers, including product information and technical data, installation instructions, product training and seminars, gasket bolting calculation tools, etc. This helps our customers and industry partners in diagnosing their different fluid sealing needs and challenges” he completes. ■
